RAPL Series

Rheem Classic Series 14 SEER Premium Condensing Unit Featuring R-410A Refrigerant

RHEEM GREEN IS MORE THAN SKIN DEEP

The RAPL model features Earth-friendly R-410A refrigerant.

SCROLL COMPRESSOR

The most expensive component of any condensing unit is the compressor. Rheem installs Copeland® Compliant Scroll® Compressors throughout its entire residential air conditioning line for proven dependability, efficiency, and sound reduction.

WRAPAROUND CABINET

Rheem air conditioning units are constructed with a powder-coat paint finish and galvanized steel cabinet to protect the condensing coil fins from yard hazards, extreme weather, and corrosion.

BASE PAN

The entire Rheem air conditioning line uses a sturdy, one-piece drawn and painted base pan. This pan elevates the coil off the pad, helping minimize corrosion while reducing sound and vibration.

PRESSURE CONTROLS

Rheem installs high and low pressure controls on high-efficiency models (options on standard-efficiency models) to protect the scroll compressor from pressure extremes.

OUTDOOR COIL

Rheem air conditioning units use an innovative wraparound outdoor coil constructed of copper tubing and aluminum fins. This design allows improved airflow transfer and helps reduce energy consumption.

EASY-ACCESS PANEL

Servicing your Rheem air conditioning unit is easy thanks to the single "easy access" panel. A service technician can easily remove this panel for access to the compressor and control box.
